

Airport: Operations Planning

MP² Airport is a powerful reporting and scenario building solution. It can be used to plan growth for your airport's traffic and profitability. It also lets you analyze past, current and future traffic at both your airport and the wider market.

MP² is an integrated solution with a single user interface. It can be interfaced with other systems and data resources in your airport's IT environment in a seamless way.

What does MP² Airport do?

- Save time - MP² gathers and manages multiple schedule versions from multiple sources.
- Easily maps revenue and cost drivers to your schedules
- Improves decision making capabilities
- Plans staffing levels including ground staff
- Allows for fact based planning
- Supports in identifying future growth goals
- Identifies your resource needs and makes sure they match forecast capacity
- Track and report on KPIs and financial drivers
- Build airport connection schedules

Functionality in detail
